

"We have now  
created the most  
quiet, comfortable  
and reliable  
headset on the  
market today."

- Red Bull® Air Race World Champion  
Hannes Arch

The AV100 was created in collaboration with  
Hannes Arch. From its feather-light weight to its  
stunning look, the AV100 is designed to impress.

# AVIATION

# IT'S NOT JUST SOUND QUALITY. IT'S SOUND THINKING.

The AV100 is the first aviation headset from AKG, one of the recording industry's leading producers of high-quality headphones, microphones and wireless systems. Now, the same acoustic technology trusted for decades by legends such as Frank Sinatra, Joe Cocker, Rod Stewart, Quincy Jones and Frank Zappa is available for the serious aviator.

## A DIFFERENT APPROACH.

Every detail of the AV100's design was considered from the ground up. It's thoughtfully imagined. Painstakingly engineered. It's not an improvement of last generation technology. It's a whole new way of thinking about the in-flight experience.

6-pin (LEMO) connector to dual (GA) plug adapter included

## FEATURES:

### Recording studio sound.

Whether you're listening to ground control or your favorite music, you'll experience the same level of acoustic quality that earned AKG a TECHNICAL GRAMMY® in 2010.

### Unsurpassed Comfort

The AV100 weighs just 12.2oz (345g) and was ergonomically designed for long-term wear. Compression molded cushions on the steel headband provide pressure relief. Protein leather and slow retention foam combine to create incredibly comfortable cushioning for your ears.

### Active Hybrid Noise Reduction

Hear what you want. Shut out what you don't. The algorithms of the ANR have been enhanced to create better separation in the cockpit.

### Advanced Bluetooth™ Connectivity

Wirelessly connect the AV100 to your phone or audio device to send and receive calls and enjoy music with superb clarity.

### AUX Input for Additional Connectivity

An additional auxiliary socket allows you to conveniently switch from the aircraft panel to an audio input for Non-Bluetooth devices.

### Powerful Handheld Control

Just like the smartest phone, the AV100 control module was engineered to do more. From dual volume control to latest Bluetooth connectivity with selectable audio priority, it's simply the smallest and most intelligently designed handheld ever.

### We thought of everything.

The AKG AV100 is the first aviation headset in the world with two powerful LED map lights that can illuminate your cockpit during night flights and sudden power failures.
